

# Units Conversion Worksheet

This worksheet adds a powerful and completely customizable physical units conversion calculations.

All units are defined in terms of its S.I. (meter-kilogram-second) equivalence using the following formula:

$$(\text{Value in S.I.}) = [ (\text{Value in Unit}) - C_n / C_d ] \cdot K_n / K_d + C_o$$

In this way, all the units conversions are defined with the values of “Cn”, “Cd”, “Kn”, “Kd” and “Co” constants.

Touch the Select Category button to display a list with units categories available. Select the desire category from the list and all the available units in that category will be shown in the Units Equivalent table.

Simply type a value in the calculator and touch the unit row in the list to assign that value to that unit. The **Units** menu will calculate all the other units equivalent values automatically.

Optionally, units arithmetics can be performed using [ + ] or [ - ] buttons in the worksheet (see the example below).

Touching the [ **Units Editor** ] button, the “**Units Editor**” view will be shown. There, you can fully edit the categories and units listing at your preference.

### **Example: Units Conversion and Arithmetic**

Add 11.36 feet plus 5.75 inches plus 2 meters plus 25 centimeters and minus 0.1 chains, what is the total length expressed in yards?

### **Solution:**

With the “Unit Conversion” menu in place, select the “**Length**” category. Then follow the next sequence:

<b>Keystrokes</b>	<b>Description</b>
11.36 touch the “ <b>ft</b> ” unit	Enters 11.36 feet.
5.75 [ + ] touch the “ <b>in</b> ” unit	Adds 5.75 inches to the conversion.
2 [ + ] touch the “ <b>m</b> ” unit	Adds 2 meters to the conversion.
25 [ + ] touch the “ <b>cm</b> ” unit	Adds 25 centimeters to the conversion.
0.1 [ - ] touch the “ <b>ch</b> ” unit	Subtract 0.1 chains from the conversion.
Touch the “ <b>yd</b> ” unit	Recalls and display the total conversion value in yards. <b>Result = 4.21 (yds)</b>
