

General Settings

In addition to the keyboard sequences that set some preferences ( [. / ,],  [Beg / End],  [DISP],  [DMY/MDY],  [360/ACT],  [Semi/Ann],  [Alg/Chain] and  [Rad/Deg]) the RLM-10BX calculator provides an extensive settings view to customize the calculator to your convenience.

The settings menu is organized into three sections: CALCULATOR, FORMATS, and FEEDBACK. Each setting is represented by a row with a label, a current value, and control buttons (toggle or slider). Red arrows point from callout boxes to the specific control elements.

| Section | Setting | Current Value | Control | Description |
|------------|------------------------|---------------|---------|--|
| CALCULATOR | Model | OLD | NEW | Select the calculator skin |
| | Calculation Logic | CHN | ALG | Toggle the operation mode between Chain or Algebraic |
